Press Release

OPEN LABS AND TIMBALAND ANNOUNCE STAGELIGHT – *TIMBALAND EDITION (Version 1.3)*

The Easy Way To Create Music – Timbaland Style

Austin, TX. – February 24, 2014 - Open Labs, LLC. (www.openlabs.com), today announced StageLight – *Timbaland Edition (v1.3)* available immediately. Priced at just \$29.99, StageLight - *Timbaland Edition* has everything an aspiring producer needs to start developing music of any genre. Included with this version of StageLight are exclusive, professional-level sounds taken directly from Timbaland's personal sound library. With everything from beats to loops, samples to exclusive drum kits, StageLight and Timbaland have what you need to start creating music today. “Get ready to make music on StageLight – *Timbaland Edition* with MY exclusive sounds,” said Timbaland. “Creating music couldn’t be any easier. The built-in lessons really do get people making music quickly.”

StageLight – *Timbaland Edition* highlights the app’s core creation capabilities, performance and overall functionality through the addition of several new 1.3 features and enhancements including Key Lock™, which enables you to maintain the key of your composition quickly and easily, without years and years of lessons and practice. “Musicians can now easily create both rhythm and lead tracks for their music - regardless of professional training or knowledge of music theory.” explained Cliff Mountain, CEO and owner of Open Labs. “For aspiring musicians, Key Lock, lends guidance to those trying to create melodies for the first time, ‘soloing’ or practicing their improvisational skills.” said Mountain.

Also included in StageLight – *Timbaland Edition (v1.3)* is the Timbaland-inspired drum machine, which makes creating drum beats fast and simple. You now have the choice of creating beats using a traditional step sequencer or with StageLight’s new velocity sensitive, touch pads. You can easily enhance and customize your drums sounds by simply adding StageLight’s native effects to your compositions as well as any 3rd Party VST or Plug-in. Version 1.3 also supports new 2-in-1 devices known as dual state change technology. This technology quickly transforms desktop mode into tablet mode. All these new features represent the major expansion capabilities of StageLight while maintaining a lighter footprint for faster, more powerful CPU performance.

StageLight’s ease of use, cutting edge functionality and low price has allowed Open Labs to capture customers in more than 120 countries worldwide and has opened countless possibilities for music creators. Open Labs is currently working with some of the largest technology companies on the planet to help bring a faster, lighter, more social music creation experience to the masses. Rajeev Puran, Application Engineer for Intel, explains, “StageLight is a music creation catalyst for the next generation of touch-based devices. Intel is working closely with Open Labs to develop new technologies that help address specific wants and needs of music creators.”

StageLight – *Timbaland Edition* can be purchased for just \$29.99 directly at www.openlabs.com. StageLight 1.3 Update is FREE for all registered owners and is available for download by simply launching the app. The Timbaland Sound Pack can be purchased for \$19.99 by any registered StageLight owner. Today, StageLight is available for PCs that have Windows 7 or Windows 8, a minimum of 4 GB of RAM and at least an Atom Bay Trail processor or equivalent. StageLight is available in English and in simplified Chinese. For more information on StageLight – *Timbaland Edition v1.3*, a video can be found here: http://www.openlabs.com/Link?LID=83_
